

Radio Telemetry of *Lophophorus lhuysii* in the Mount Min

By GUO Geng

Abstract:

Lophophorus lhuysii, Genus *Lophophorus* of the Family *Phasianidae*, Order *Galliformes*, is a large alpine bird peculiar to China and is a National First-class Key Protected Animal. They are mainly distributed in high altitude areas of western Sichuan, and scatter in northwestern Yunnan, eastern Tibet, eastern Gansu and southeastern Qinghai. Due to human activities, the wild population of *Lophophorus lhuysii* is very rare. When the author conducted field investigation in Mount Min 30 years ago, they could see flocks of *Lophophorus lhuysii*, which was really rare!

Key words: *Lophophorus lhuysii*, Mount Min, field investigation, radio telemetry
