

## The latest IUCN assessment shows that there are 3726~5578 tigers living in the wild in the world

By Linda

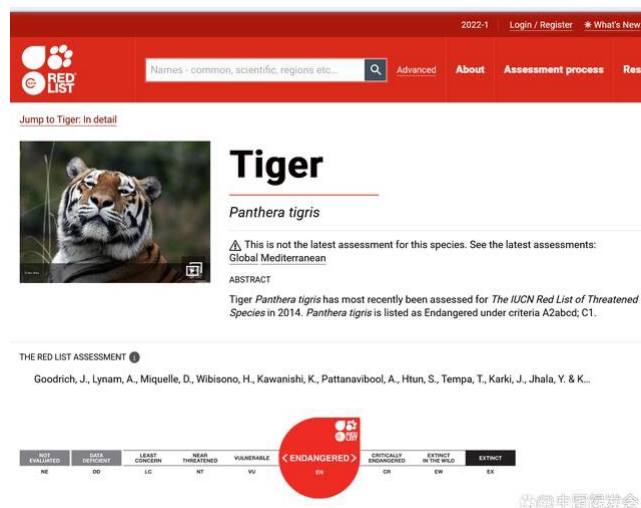

### Abstract:

The International Department of China Biodiversity Conservation and Green Development Foundation, a member of the IUCN, noted that the report pointed to a 40% increase in number of tigers living in the wild since the last tiger assessment in 2015. On July 21, 2022, the IUCN's newly updated Red List of Threatened Species shows that between 3,726 and 5,578 tigers are now living in the wild worldwide.

### Key words:

IUCN Red List, tigers, wildlife

The screenshot shows the IUCN Red List page for the Tiger (*Panthera tigris*). The page features a red header with the IUCN logo and navigation links. A search bar is present, and a link to 'Jump to Tiger: In detail' is visible. The main content area includes a photograph of a tiger, the species name 'Tiger' and '*Panthera tigris*', and a warning that this is not the latest assessment. An abstract states that the tiger was last assessed in 2014 and is listed as Endangered under criteria A2abdc, C1. Below the abstract, the 'THE RED LIST ASSESSMENT' section lists the assessors: Goodrich, J., Lynam, A., Miquelle, D., Wibisono, H., Kawanishi, K., Pattanavibool, A., Htun, S., Tempa, T., Karki, J., Jhala, Y. & K... At the bottom, a horizontal scale shows the IUCN Red List categories: Not Evaluated, Data Deficient, Least Concern, Near Threatened, Vulnerable, Endangered (highlighted in red), Critically Endangered, Extinct in the Wild, and Extinct. A small logo for '中国生物多样性基金会' is also visible.
