

Sara Platto: Using the potential of drylands environmental instability for food security

Author: Sara Platto

Abstract:

Pastoralism has high economic value in biodiversity protection and ecosystem service. It faces challenges of environment change and market accessibility. Coop-systems can help with access to national markets, provide advanced technology to better production. It can also mitigate conflict between local people and provide subsidiaries to local people with environmental supervision and protection.

Key words: pastoralism, biodiversity, ecosystem, coop-system
