

Jorgen Randers: what can science do to a green future?

Author: Martin Palmer

Abstract:

In the middle of this century, due to population boom, biodiversity loss and ecosystem break down is inevitable. To cope with this tragedy, use less fossil fuels, control population growth, let the wealth pay for transformation and take new development mode are feasible suggestions. Science can support green transformation.

Key words: population growth, biodiversity loss, fossil fuels, transition cost, science
