

**To solve global environmental problems, we must uphold the UN system and
strengthen international cooperation**

By WANG Zhijia¹

Abstract:

China is the vanguard and backbone of sustainable development. China produces 80 percent of the world's solar panels and 60 percent of the world's new growth of solar energy. 80% of the world's hydropower comes from China, and 99% of electric buses run on China's roads. China is increasingly leading the world in environmental protection measures. We should also be aware that if we are to truly address global environmental and development issues, we must respect the UN Charter, uphold the UN system, strengthen international cooperation and ensure equity in the green transition.

Key words:

climate change, environmental awareness, United Nations, sustainable development

WANG Zhijia. To solve global environmental problems, we must uphold the UN system and strengthen international cooperation. Biodiversity Conservation and Green Development, Vol.1 No.9, August 2022, ISSN2749-9065.
