

New Thoughts: Regional Comprehensive Assessment of Biodiversity

Author: Feng Zi

Abstract

The current biodiversity assessments are mostly based on GIS and GEP systems. Taking into account the deficiencies of the above two systems, CBCGDF has proposed the idea of Regional Comprehensive Assessment of Biodiversity (RCAB) in order to establish a more scientific and direct ecological environment index. Nature-oriented RCAB, based on traditional assessment index, comprehensively assesses the environment with biodiversity index at its core.

Key words: biodiversity assessment, ecological environment index, Regional Comprehensive Assessment of Biodiversity (RCAB)
