

Encountering five types of plants on Tongbai Mountain in spring

By HUO Daishan, FENG Lu, LIU Xiaming, QIN Xiufang

Abstract: Tongbai Mountain is located between Suixian County in Hubei Province and Tongbai County in Henan Province. It is rich in natural resources and has a wide variety of species, making it an important biological species gene bank in central China. This article summarizes five plants growing in this region, namely *Arisaematis Rhizoma*, *Polygonatum odoratum* (Mill.) Druce, *Staphylea bumalda* DC., *Changnienia amoena* S. S. Chien, and *Corydalis incisa* (Thunb.) Pers.. It provides a detailed introduction to their growth characteristics, appearance characteristics, and application in the field of traditional Chinese medicine, showcasing the beauty of biodiversity in Tongbai Mountain and the important role of rich species resources in the development of traditional Chinese medicine.

Key words: Tongbai Mountain, plants, natural resources
